

GYM & FITNESS STUDIO SOFTWARE

Invoicing software built for how a studio actually runs

A studio runs on two things at once: classes that need a slot and can't double-book a trainer or room, and memberships that need to bill themselves every month without anyone re-typing an invoice. Invoice2Track checks every session against the calendar before confirming it, and lets a membership plan renew on its own schedule.

How it works

- 1 Set up membership plans**
Define the tiers your studio actually offers — Gold, Silver, or whatever fits — each with its own price and billing frequency.
- 2 Enroll a member**
Sign a member up against a plan once; from then on, their billing follows the plan's schedule without anyone re-entering it.
- 3 Book classes and sessions**
Reserve a trainer, room, or class slot with the same overlap-checking used across every booking-based feature — nothing gets double-booked.
- 4 Let renewals bill themselves**
When a membership's renewal date arrives, the invoice generates on schedule automatically, with the member's tier discount already applied.
- 5 Track who's paid**
See at a glance which members are current and which renewals are outstanding, without cross-checking a separate spreadsheet.

Key capabilities

• Class & session booking Book a trainer, room, or class slot with the same overlap-checking that powers turf and court bookings — nothing gets double-booked.	• Recurring membership billing Set a membership plan once — weekly, monthly, or yearly — and it bills itself on schedule, no manual re-entry every renewal.
• Membership tier discounts Gold, Silver, or any tier you define — the right discount applies automatically the moment a member is billed.	• Trainer & room scheduling Every session checked against a trainer's and room's existing bookings before it's confirmed, avoiding double-booked slots.
• GST-ready billing Turn on GST billing and every printed invoice applies the correct tax treatment automatically.	• Membership renewal visibility See which memberships are up for renewal or already overdue in one place, rather than tracking it manually.
