

HARDWARE SOFTWARE

Invoicing software built for how a hardware counter actually runs

A hardware shop counter needs real stock control without the overhead of a full warehouse ERP. Invoice2Track gives you proper inventory and vendor purchasing sized for a shop, not a distribution center — fast enough to use between customers at the counter.

How it works

- 1 Stock the shelf**
Receive items against a purchase order, adding them to stock with the right cost and quantity.
- 2 Bill fast at the counter**
Add items to a customer's bill quickly, even mid-sale adding a new product or customer on the fly without losing the invoice already in progress.
- 3 Stock deducts automatically**
Every item counted and deducted the moment it's billed — no manual stock book to update at day's end.
- 4 Watch what's running low**
See low-stock items surface on one screen, ready to reorder from your regular supplier.
- 5 Reorder from your suppliers**
Raise a purchase order and keep purchase history against every product, all in the same system as your sales.

Key capabilities

• Full stock control Every item counted and deducted automatically as it's billed — no manual stock book.	• Vendor purchasing Reorder from your regular suppliers and keep purchase history against every product.
• Fast counter billing Quick-add a new product or customer mid-sale without losing the invoice you're already on.	• GST-ready billing Turn on GST billing and every printed invoice applies the correct tax treatment automatically.
• Low stock alerts See what's running low on one screen instead of discovering it's out when a customer asks.	• Thermal receipt printing Print straight to a POS roll printer right at the counter.
