

HOTELS & CAFE SOFTWARE

Invoicing software built for how a hotel actually bills a guest

Rooms and table service both end up on the same guest folio, and both draw down the same kitchen and housekeeping stock. Invoice2Track bills rooms and food as line items on one invoice, keeps inventory synced against what's actually used, and puts every reservation on a shared calendar your front desk can see at a glance.

How it works

- 1 Reserve the room**
Book the stay against the shared calendar the whole front desk can see, avoiding a double-booked room.
- 2 Check in and open the folio**
Room charges start against the guest's invoice from check-in.
- 3 Add food and service as it happens**
Table service, room service, anything ordered during the stay bills as a line item on the same guest invoice.
- 4 Stock deducts as it's used**
Kitchen and beverage items deduct automatically as they're billed, keeping counts accurate without a manual recount.
- 5 Settle at checkout**
One invoice covers the room and every charge from the stay, ready the moment the guest checks out.

Key capabilities

• Rooms + food, one invoice Room charges and table service bill as line items on the same guest invoice.	• Kitchen inventory synced Stock deducts automatically as food and beverage items are billed, so counts stay accurate without a manual recount.
• Booking calendar Reservations and event bookings live on one calendar the whole front-of-house team can see.	• GST-ready billing Turn on GST billing and every printed invoice applies the correct tax treatment automatically.
• Vendor purchasing Track supplier purchase orders and history for kitchen and housekeeping stock, restocked as it's used.	• Thermal receipt printing Print straight to a POS roll printer at the front desk or cafe counter.
