

TEXTILE SOFTWARE

Invoicing software built for how a textile business actually tracks stock

A dye lot or a fabric roll behaves like a batch, whether or not your invoicing software treats it like one. Invoice2Track tracks textile and garment stock by batch as standard, so a size run or a color lot is traceable months after the sale, not just a line item that's already forgotten.

How it works

- 1 Receive fabric or garments by lot**
Every incoming roll or garment batch is recorded with its own lot identity as it enters stock.
- 2 Track through to sale**
The lot's identity carries forward with the stock, whether it's a fabric roll or a finished garment size run.
- 3 Bill export orders correctly**
Invoice a buyer in their own currency, with the right decimal handling built in for that currency.
- 4 Reorder from mills and suppliers**
Vendor purchase orders sit alongside your sales invoices, tracked in the same system.
- 5 Trace a lot after the sale**
Answer a size run or color lot question months later, since the batch identity was tracked from the start rather than reconstructed.

Key capabilities

• Batch-tracked stock Fabric rolls and garment lots carry a batch identity through purchasing, stock, and sale.	• Vendor & purchase management Track mill and supplier purchase orders alongside your outgoing sales invoices.
• Multi-currency ready Bill export orders in the buyer's currency, with correct decimal handling built in.	• GST-ready billing Turn on GST billing and every printed invoice applies the correct tax treatment automatically.
• Full inventory control Every roll or garment counted and deducted automatically as it's billed — no manual stock register.	• Purchase history per product See every past purchase order against a fabric or garment line, not just the current stock count.
